

# A. Uberti

HISTORY REPEATS ITSELF

**T**he birth of A. Uberti, world famous Company for its production of historical replica firearms, goes way back to 1959 where its activity started in quite unusual circumstances.

The American market was looking for someone to produce the 1851 Navy to commemorate the centennial of the American Civil War. A. Uberti accepted the project and, in a very short time, was able to produce the first 2000 pieces.

The product was so well accepted that the order was renewed, giving A. Uberti the opportunity to be the "first" Company to reproduce historical replica firearms and, today, is still one of the leading Companies in the world.

At the end of 1965, the very first lever action replica came to light, the 1866 Winchester and, the following year, the first breech loading replica revolver, a copy of the 1873 Colt Single Action, re-christened by A. Uberti as the "Cattleman", now a famous name all over the world. Aldo Uberti understood the spirit of these historical firearms, they were not just tools to be used for shooting, but had a real story that reflected in the American history. The funny thing about all this is that the very first replicas made by Aldo were copied by other gun makers who, trying to reproduce a "copy of a copy", produced an undersized replica! Obviously, they did not have the same passion as Aldo.

# ABOUT UBERTI

Using superior quality forged steel, state-of-the-art technology and high precision machine tools, combined with the centuries-old skills of polishers, engravers and stockers, A. Uberti is able to create historical firearms with the same loving care with which the originals were crafted all those centuries ago. In the Beretta Group since the year 2000, the Company moved into a brand new ultra modern building in the year 2002 with all the up-to-date facilities and excellent environmental conditions for its workers. High tech machinery was also introduced on a large scale.

*Giacomo Merlino,  
President of A. Uberti  
S.p.A., oversees the  
exacting recreation of  
the numerous historic  
firearms manufactured  
by Uberti in Gardone Val  
Trompia, Italy.*

We are proud to claim that ardent collectors and demanding shooters from all over the world find that our guns reproduce not only the same shapes and mechanical and ballistic features, enhanced by modern production methods, but also in the same spirit of those guns that have occupied pages and pages of history in the course of the century.

**FORGINGS**

# A. Uberti

# 1847 WALKER

**Samuel Colt began production of a revolving-cylinder pistol** on the day the Alamo fell in 1836. Produced at his factory in Paterson, New Jersey, Colt's new pistol was enthusiastically received by the Rangers of the newly independent Republic of Texas and in 1844 Colt's pistol made history when sixteen Rangers held off 80 Comanche warriors with their new revolvers.

Former Texas Ranger Sam Walker had been in the Comanche fight in 1844 and became a firm believer in Colt's pistols. In 1846, war with Mexico was looming and Walker's U.S. Mounted Rifles needed a powerful handgun for mounted combat. Colt built a revolver for them that held 58 grains of black powder and chambered six, .44 caliber balls. Sam Walker ordered 1,000 of them and rode off to Mexico.

The Walker's massive fire-power needed a much stronger frame and larger overall gun design than earlier models—the Walker weighed nearly four-and-a-half pounds and was 15¾" long. The Walker's reputation assured Colt's future success.

**1847 WALKER**

**WALKER PRESTIGE — 9"**  
HAND ENGRAVING IN GOLD WITH EAGLE  
(E44) CHARCOAL BLUE FINISH (C00)

*The Walker's large capacity cylinder allows it to hold up to 58 grains of blackpowder and offers easy access to the percussion caps.*

*The Walker featured a brass square-back trigger guard—an improvement over the Paterson's guardless folding trigger.*

*The Walker was one of the first revolvers fitted with a loading lever. Colt later added a loading lever latch near the muzzle.*

# 1848 DRAGOON

With an improved loading lever, shorter cylinder and lighter weight, the Dragoon was an improvement over the Colt Walker. Of the four Dragoon models, the first was manufactured for Colt by Eli Whitney. Small enhancements separate the four Dragoon models; the Whitneyville model is made like the original Walker, but uses a dragoon barrel and cylinder, the 1st model uses oval cylinder bolt slots, the 2nd model uses squared cylinder bolt slots, and the 3rd model incorporates a round trigger guard.

**1848 3RD MODEL DRAGOON** — 7½"  
CASE-HARDENED, WALNUT GRIP

*Modern machinery and improved materials result in a stronger and more precise metal-to-metal fit on Uberti's replica firearms.*

*The Dragoon featured many design improvements over the Paterson, and included many parts identical to those used on the Walker, like the brass square-back trigger guard, making it a unique hybrid of old and new.*

*The Dragoons were the first Colt revolvers to feature a latch for the loading lever. This prevented the loading lever from falling during firing.*

*The Walker and all Dragoon models have integrated loading cut-outs for easy and secure seating of the percussion caps.*

# 1848 BABY DRAGOON, 1849 POCKET, WELLS FARGO, POLICE

**1862 POLICE** —5 ½"  
ANTIQUE FINISH (A00)

Encouraged by an ongoing military contract, Colt turned his eye toward the civilian market in 1848. Civilian pocket revolvers, such as the Wells Fargo or 1849 Pocket, were .31 caliber pistols that fit easily in a coat pocket. Just as silver spring steel allowed Colt to adapt a .44 cylinder to a .36 frame, it permitted the .31 cal. 1849 Pocket revolver to be upgraded to a .36 cal. The 1862 Pocket Navy retains the octagon barrel and hinged loading lever of the 1851 Navy, while the 1862 Police model is a miniature of the 1860 Army, with fluted cylinder, streamlined round barrel and “creeping” loading lever. The Pocket and Police were the last two muzzle loading models to be produced by Colt and together they totalled approximately 47,000. About 19,000 were the model 1862 Pocket Navy.

**1862 POCKET** — 5 1/2"

**1862 POLICE** — 6 1/2"  
CHARCOAL BLUE FINISH (C00)

The 1851 Navy was a scaled up .36 caliber version of the 1849 Pocket Model. The handy, more powerful revolver immediately found a following among soldiers and civilians alike and was eventually adopted by both the U.S. and the British military. By the start of the Civil War, Colt had refined the Navy into a sleek, streamlined weapon with an improved loading lever. The 1861 Navy is often acclaimed as Colt's most handsome pistol.

Colt worked to perfect his cap and ball revolver, designing the 1860 Army around a lightweight frame, but chambered for the more powerful .44 caliber ball. The first models featured fluted cylinders, while later models incorporated a belted cylinder for added strength and a "creeping" loading lever for easier loading. The sleek 1860 Army is considered to be the ultimate combat handgun of the percussion era.

1858  
NEW IMPROVED ARMY

The Remington Arms Company began production of the large frame .44 caliber, "Remington-Beals" revolver in 1861. The rugged, solid framed Remington quickly became popular and the improved New Army model was purchased by the U.S. Army in 1863. In the years following the Civil War, Remington manufactured a carbine version in small numbers.

## RICHARDS, RICHARDS MASON, OPEN TOP, 1858 NEW IMPROVED

In 1871, an employee from Colt by the name of Charles Richards was awarded a patent for converting Colt percussion models to breech loading cartridge revolvers. The Richards cartridge conversion was an instant success. On July 2nd, 1872, William Mason, another employee from Colt, was awarded a patent for an improvement to the Richards model. As percussion parts ran short, the 1860 Richards-Mason barrel was changed from the profile of the earlier percussion model, to the sleek profile found on the 1871-72 Open Top. The 1858 New Army improved conversion was introduced by Remington in circa 1873 with special factory installed two piece cylinder, leaving the loading lever and adding an ejector.

The Colt 1862 POCKET CONVERSION was intended for security personnel and followed the line of other Colt products emerging during this time of history. The 3.½" round barrels were easy to manufacture as there was no loading gate and no cartridge ejector system. This was strictly a pocket or "hide-away" revolver, therefore its accuracy was limited due to the barrel length.

## 1873 SINGLE ACTION CATTLEMAN

Made in 1872 this is a gun that needs no introduction. The buyer can specify either the "old model" screw retainer for the cylinder pin or the more convenient "new model" plunger. The grip frame can be either steel or brass and, on the metal surface, you can select standard blueing, eye-catching charcoal blueing, full nickel plating, white finish, old west antique finish. Grips can also be selected, i.e. smooth walnut, checkered walnut, black plastic, polymer ivory, pearl or buffalo. These single actions are available also with a "birdhead" style grip (only in walnut). Uberti has such a vast range of Single Action revolvers - between the finish, caliber and barrel length, you are looking at an assortment of over 500,000 different models. Incredible but true!

# SHORT-STROKE

**Short-Stroke Cattleman** against Standard Cattleman Introducing the Short-Stroke Cattleman against the Standard Cattleman. Available on all Cattleman models. Reduced cycle time provides shooters an extra edge on the range.

## THE CATTLEMAN – RETRACTABLE FIRING PIN®

Single-action army revolvers are now available from Uberti that are not only aesthetically accurate but also offer the benefits of a modern transfer bar revolver—all made possible by the introduction of a retractable firing pin.

While at rest, the firing pin floats free in its guide, exerting no pressure towards the chamber.

When the hammer is at full cock, the firing pin floats free exerting no pressure.

When the trigger is pulled from a fully-cocked position, the transfer bar engages the firing pin, locking it in the forward position until the trigger is released.

# REVOLVER CARBINE AND BUNTLINE

**Legend has it that dime novelist,** Ned Buntline presented special order Colt revolvers with long barrels and detachable shoulder stocks to Wyatt Earp, Bat Masterson and other noted Old West celebrities. Based on this story, the long-barreled "Peacemakers" with their special target sights came to be called "Buntline Specials." Only 31 of the distinctive Buntline Specials were ever produced and only 18 of them still exist today.

Revolving rifles and carbines were among the first effective repeating rifles. Models produced by Colt were carried in the Mexican War and the Apache Wars of the Old Southwest. Despite the popularity of the new lever-action rifles in the Old West, many manufacturers continued to offer special-order "carbine" versions of their popular single action revolvers. The Revolver Carbine is available with an 18" barrel in .45 caliber.

*The Bisley was designed as a target pistol and features a longer grip-frame and a wide, lower profile, target hammer.*

The **Colt Bisley** was designed as a target pistol to compete at the British Commonwealth Championship Match in Bisley, England in 1894. The Bisley featured a longer grip-frame for its target grips and a wide target hammer with a lower profile. Over 40,000 Colt Bisleys were made between 1894 and 1915.

1875 OUTLAW  
1890 POLICE

**Keeping the solid frame and overall styling** of their 1858 percussion model, Remington jumped into the cartridge revolver market in 1875, introducing a pistol to compete directly against the Colt "Peacemaker." Ordinary citizens, outlaws and Old West lawmen alike recognized the sturdy quality of the new Remington; even Frank James carried one for much of his outlaw career. As faithful reproductions, the 1875 Outlaw revolver is available in Frank's favorite caliber, .45 Colt.

Built from 1890 to 1896 in very small numbers, the Remington 1890 Police is one of the most prized cowboy revolvers among Old West collectors. Of the less than 2,000 produced, only a few Remington 1890s ever saw service as police revolvers and those primarily as sidearms for Indian police on western reservations. The 1890 Police is chambered in .357 Magnum and .45 Colt and comes complete with a lanyard ring just like the original.

*The 1875 Army Outlaw embodies the overall styling of the original Remington 1858 percussion revolver complete with bottom blade.*

*The 1890 Police is chambered in .357 Magnum and .45 Colt and like the original, it comes complete with a lanyard ring.*

*The 1890 Police, styled similar to the Colt by eliminating the bottom blade, was Remington's offering to enter the lucrative single-action revolver market.*

# 1875 SCHOFIELD

## 1875 SCHOFIELD 2<sup>ND</sup> MODEL.

This legendary Schofield revolver was one of the most popular revolvers used during the period of the far west. Designed by Major George Schofield as a cavalry pistol, the efficient break-open design could be operated one-handed, ejecting all six spent cartridges and providing easy access for reloading while on horseback. Jessie James, John Wesley Harden and Wild Bill Hickok saw the Schofield's fast reloading as a distinct advantage in their line of work.

# AMERICAN N° 3

**Manufactured between 1870 and 1874.** Preceded the Colt Single Action by over three years, and historically has a fine association with the American West. Almost 29,000 were manufactured in .44 S&W American and (rare) 44 rimfire Henry calibers, 6-shot fluted cylinders, 8" round barrels; and a few reduced to 6" length.

1872 AMERICAN N°3 — 7"

*The Top Break features an automatic cartridge extractor, which greatly aids in discharging empty cartridges. This feature added to its appeal as a cavalry sidearm.*

# 1871 BABY ROLLING BLOCK

## 1871 BABY ROLLING BLOCK CARBINE AND RIFLE

The Remington Arms Company has a letter from George Armstrong Custer extolling the virtues of his Remington Rolling Block Sporting Rifle. In fact, legend has it that Custer was carrying his faithful Rolling Block at Little Big Horn. The Rolling Block was produced as a military full-stock musket, target rifle, buffalo gun and even as a shotgun. The small-framed version was the "New Model N°4", and Uberti has used its inspiration for a 22" barrellled carbine, and the 26" barrellled rifle.

**1860 HENRY**  
HAND ENGRAVING (E16)

**1860 HENRY**  
HAND ENGRAVING MOD. LINCOLN (E18)

**B. Tyler Henry of the New Haven Arms Company** introduced a lever-action repeating rifle the year the Civil War began. Only 1,700 Henry rifles were issued to Union troops, but as the Henry's reputation grew, Southerners dubbed it "that tarnation Yankee rifle that they load on Sunday and shoot all week." After the war, the Henry went West and there was more than one Henry rifle in the battle at Little Big Horn, but unfortunately for Custer, all of the Henrys were used by Indians. The early bronze-framed Henrys were followed by more rugged iron-framed models.

*Uberti's 1860 Henry is true to the original by featuring a lever lock located at the rear of the lever, and a convenient external cartridge follower, which aids in loading the tubular magazine.*

# 1866 YELLOWBOY CARBINE AND RIFLE

**The 1866 Yellowboy** was a marked improvement over the old Henry. Winchester's plant superintendent, Nelson King, devised a convenient loading gate that passed cartridges through the side of the receiver. This not only made the new rifle more functional, but also allowed for the installation of a wooden fore-end. The handy carbine version of the 1866 Yellowboy was the first true cowboy lever-action rifle and was the first rifle widely carried in a cowboy-style saddle scabbard.

The new 1866 Yellowboy was a hit worldwide. Chief Sitting Bull had an 1866, Benito Juarez's forces used Yellowboys in Mexico and the Turkish army used the new Winchester against the Russians. Uberti has recreated three of the most popular models: the Yellowboy Carbine with a 19" barrel and carbine style brass buttplate, the Yellowboy Rifle with 24¼" barrel and Short Rifle with 20" barrel, both with a brass fore-end nose cap and a solid brass crescent buttplate.

# 1873 RIFLE AND CARBINE

Winchester's Model 1873 was the "Rifle that Won the West." The Model 1873 was chambered in a new more powerful cartridge, the .44/40 — a .44 caliber bullet propelled by 40 grains of black powder. However, one big factor that really insured the success of the 1873 was that Colt quickly responded by offering its frontier six-shooter chambered in .44/40. A cowboy could have both a lever action rifle and his "Peacemaker" and only need one cartridge belt.

Buffalo Bill Cody carried an 1873 and a pair of Colts chambered in .44/40 in 1876 when he worked as an Army scout. Chappo, son of Apache Warchief Geronimo packed an 1873, as did most Texas Rangers along with every Old West Cowboy worth his salt. Uberti has recreated the 1873 in five distinctive models including the 1873 Carbine and the Special Sporting Rifle.

*The 1876 rifle includes a lever lock to ensure the lever remains securely in place.*

## 1876

# RIFLE AND CARBINE

**1876 RIFLE — 28"**  
CASE-HARDENED, STRAIGHT STOCK

**1876 CARBINE — 22"**  
COLOR CASE HARDENED FRAME (B01)

**In 1876 Winchester introduced a new lever-action rifle;** they called it the "Centennial Rifle" in commemoration of the United States' 100th anniversary. Winchester's Model 1876 was discontinued in 1898, after 63,871 guns had been produced. For 2008, 132 years after the first 1876 Rifle was produced by Winchester, Uberti introduces an exact replica of the Winchester "Centennial Rifle." True to the original, Uberti's 1876 Rifle is chambered in the hard-hitting calibers: .45-60, .45-75, .50-95 and .40-60—strong enough to take down North America's largest big-game animals. It also comes with a 28" octagonal barrel, fully-adjustable sights, color case-hardened receiver and walnut straight stock and fore-end.

Favored by the likes of Theodore Roosevelt, the 1876 "Centennial Rifle" was the King of its day. Uberti has brought this legend back to life, only better than before. Better, stronger materials and more precise machining, enables Uberti to replicate the original model to more exacting tolerances and specifications, making it stronger and more accurate with today's modern smokeless and blackpowder ammunition. When you pick up an Uberti, you're holding history in your hands!

1883 BURGESS RIFLE — 25½"

# 1883 BURGESS RIFLE AND CARBINE

## 1883 MODEL LEVER ACTION RIFLE

The 1883 Colt Burgess lever action made from '83 to '85 represents Colt's lone attempt to compete with Winchester for the lever action rifle market. Colt's initiative resulted in 6403 rifles. Manufacture of the Colt Burgess ceased early in 1885, only 21 months following its introduction.

The model gun for the Colt Burgess is exhibited in the Colt Collection of the Connecticut State Library. With such a small production the Burgess is one of the rarer models of Colt weapons and has considerable Collector's appeal.

Collectors have nicknamed the Colt lever action the "Burgess" after its inventor, Andrew Burgess. Burgess was a well known civil war photographer, designer of fire alarms and a prolific designer of firearms. He had nearly 600 firearms patents to his credit.

Only three engraved pieces were made and one of these (serial n°285) was presented to William F. (Buffalo Bill) Cody. On the side of the frame is a motif of Cody shooting a buffalo from horseback, using a Colt Burgess rifle. So, the fact that Buffalo Bill Cody owned one of these guns adds to their color and appeal, as does the overall handsome design and the lever operated action.

Original price sheets from Colt and Winchester show the Winchester 1873 carbine was priced at \$17,50 whereas the Colt Burgess carbine was priced at \$24,00.

According to tradition, Winchester did not take kindly to the intrusion and developed a few revolver designs which would have then been in direct competition with Colt's mainstay products. Before long, a deal was reached and Winchester agreed to stay out of the revolver business.

*Colt's Burgess featured a loading gate that slid forward rather than the spring loaded pushdown loading gate of the Winchester lever actions*

1883 BURGESS CARBINE — 20"

# 1884 LIGHTNING RIFLE AND CARBINE

The **Colt Lightning rifle**, introduced in 1884, was chambered in .44-40, the most popular pistol round offered for Colt's 1873 single action revolvers. Colt followed with Lightnings in three different frame sizes to accommodate a wide range of cartridges from .22 caliber up to .50-95 Express. More than 185,000 Lightning Rifles were manufactured, but there hasn't been a new one made since 1904 — that is until now.

The Lightning Rifle by Uberti is an exact replica of the original Colt Lightning, but by using modern steel and manufacturing techniques, the Uberti Lightning will safely stand up to modern ammunition. The Lightning Rifle is available in .45 Colt or .357 Magnum, all with luster finished satin walnut stocks and a choice of blued or color case-hardened receivers. When it comes to speed it can still beat any Winchester —or, as Sam Colt used to put it, "nothing is faster than Lightning."

## 1885 SINGLE SHOT

### 1885 SINGLE SHOT RIFLES AND CARBINE

The production of the Single Shot started in September 1885 using the Browning patent and terminated towards the end of 1920. It became one of the best known guns and was regarded by many as being the best Single Shot ever to be made. Without doubt it is stronger than the Sharps, better designed, very accurate and reliable in every way. Few guns have been made in so many different calibers - high walls even served in the development of the 7.62 Nato round.

The gun was produced during a period in which target shooting was a really popular sport; they were used in International Competitions at 1,000 yards.

# MODEL 1894

## RIFLE AND CARBINE

REPLICA OF 1ST MODEL 1894  
WITH FORGED FRAME  
COLOR CASE FRAME (B01) STANDARD FOR RIFLE

There are a handful of guns that claim the title “the gun that won the west”, but only one lever action repeating rifle truly won the favour of the hunters and shooters across the country. The Model 1894. Designed with power and practicality in mind, John M. Browning was the innovative mind behind the first sporting rifle that was made to handle the new high-velocity, smokeless powder ammunition introduced in the late 19th century. With its ease of operation, quick handling, and chambering for one of the most popular hunting cartridges, .30-30

**1894 CARBINE** — 20"  
COLOR CASE FRAME (B01)

*A cartridge-control mechanism allows controlled-round-feed so that the gun can be fired reliably while held at any angle*

## UBERTI SCOUT

**The Uberti Scout** is the ultimate small-bore lever action rifle chambered in cal.22LR/.22Mag. This is an all-original lever action firearm, based on the classic styling of the Old West lever gun. The Uberti Scout embodies the best features of the proven lever-gun design that goes back as far as the mid-1800s.

Chrome-plated alloy receiver, walnut straight stock. Great for youths, ladies and anyone who enjoys small game hunting or just plinking. Unique feature on this little gun – it has a cartridge mechanism allowing controlled round-feed so the gun can be fired reliably while held at any angle.

UBERTI SCOUT — 19"

*An attractive trigger guard gives the Coach Gun a more refined appearance.*

## COACH GUN

**The Coach Gun** was designed with Cowboy Action Shooters in mind. Competitors are required to shoot a six-gun, rifle and shotgun in every match, so there is a high demand for a short barreled shotgun. Stocked with American walnut, the Coach Gun is as handsome as affordable. The short-barreled Coach Gun also makes a potent home defense gun. It's the right shotgun at the right price.
