

The birth of A. Uberti, world famous Company for its production of historical replica firearms, goes way back to 1959 where its activity started in quite unusual circumstances. The American market was looking for someone to produce the 1851 Navy to commemorate the centennial of the American Civil War. A. Uberti accepted the project and, in a very short time, was able to produce the first 2000 pieces. The product was so well accepted that the order was renewed, giving A.Uberti the opportunity to be the "first" Company to reproduce historical replica firearms and, today, is still one of the leading Companies in the world.

At the end of 1965, the very first lever action replica came to light, the 1866 Winchester and, the following year, the first breech loading replica revolver, a copy of the 1873 Colt Single Action, re-christened by A. Uberti as the "Cattleman", now a famous name all over the world. Aldo Uberti understood the spirit of these historical firearms, they were not just tools to be used for shooting, but had a real story that reflected in the American history. The funny thing about all this is that the very first replicas made by Aldo were copied by other gun makers who, trying to reproduce a "copy of a copy", produced an undersized replica! Obviously, they did not have the same passion as Aldo.

Using superior quality forged steel, state-of-the-art technology and high precision machine tools, combined with the centuries-old skills of polishers, engravers and stockers, A. Uberti is able to create historical firearms with the same loving care with which the originals were crafted all those centuries ago. In the Beretta Group since the year 2000, the Company moved

> into a brand new ultra modern building in the year 2002 with all the up-to-date facilities and excellent environmental conditions for its workers. High tech machinery was also introduced on a large scale.

> We are proud to claim that ardent collectors and demanding shooters from all over the world find that our guns reproduce not only the same shapes and mechanical and ballistic features, enhanced by modern production methods, but also in the same spirit of those guns that have occupied pages and pages of history in the course of the century.

Giacomo Merlino, Managing Director of A. Uberti S.p.A., oversees the exacting recreation of the numerous historic firearms manufactured by Uberti in Gardone Val Trompia, Italy.

The Walker's large capacity cylinder allows it to hold up to 58 grains of blackpowder and offers easy access to the percussion caps.

Samuel Colt began production of a revolving-cylinder pistol on the day the Alamo fell in 1836. Produced at his factory in Paterson, New Jersey, Colt's new pistol was enthusiastically received by the Rangers of the newly independent Republic of Texas and in 1844 Colt's pistol made history when sixteen Rangers held off 80 Comanche warriors with their new revolvers.

Former Texas Ranger Sam Walker had been in the Comanche fight in 1844 and became a firm believer in Colt's pistols. In 1846, war with Mexico was looming and Walker's U.S. Mounted Rifles needed a powerful handgun for

The Walker featured a brass square-back trigger guard—an improvement over the Paterson's guardless folding trigger.

The Walker was one of the first revolvers fitted with a loading lever. Colt later added a loading lever latch near the muzzle.

mounted combat. Colt built a revolver for them that held 58 grains of black powder and chambered six, .44 caliber balls. Sam Walker ordered 1,000 of them and rode off to Mexico.

The Walker's massive fire-power needed a much stronger frame and larger overall gun design than earlier models—the Walker weighed nearly four-and-a-half pounds and was 15¾" long. The Walker's reputation assured Colt's future success.

With an improved loading lever, shorter cylinder and lighter weight, the Dragoon was an improvement over the Colt Walker. Of the four Dragoon models, the first was manufactured for Colt by Eli Whitney. Small enhancements separate the four Dragoon models; the Whitneyville model is made like the original Walker, but uses a dragoon barrel and cylinder, the 1st model uses oval cylinder bolt slots, the 2nd model uses squared cylinder bolt slots, and the 3rd model incorporates a round trigger guard.

Modern machinery and improved materials result in a stronger and more precise metal-to-metal fit on Uberti's replica firearms.

The Dragoon featured many design improvements over the Paterson, and included many parts identical to those used on the Walker, like the brass square-back trigger guard, making it a unique hybrid of old and new.

The Dragoons were the first Colt revolvers to feature a latch for the loading lever. This prevented the loading lever from falling during firing.

ultimate combat handgun of the percussion era.

ALWAYS STORE YOUR FIREARMS IN A SECURE AREA, INACCESSIBLE TO CHILDREN

A rear view of the 1860 Army Civil hammer and cylinder shows the frame cut-out and nipples in the rear of the cylinder that allows percussion caps to be seated.

1858 New Improved Army, Farget Garbine

The Remington Arms Company began production of the large frame .44 caliber, "Remington-Beals" revolver in 1861. The rugged, solid framed Remington quickly became popular and the improved New Army model was purchased by the U.S. Army in 1863. In the years following the Civil War, Remington manufactured a carbine version in small numbers.

The 1858 New Army is fitted with a brass trigger guard on both the stainless and blued models.

The 1858 New Army features an octagonal barrel with a dove-tailed front sight and loading lever latch.

All of Uberti's revolver cylinders are machined so that the nipple recesses and cylinder notches are cleanly cut and precise.

1873 CATTLEMAN— 5½" CHARCOAL BLUE FINISH (C00) POLYMER PEARL GRIPS (G16)

1873 CATTLEMAN THUNDERER* — 3½"

1873 CATTLEMAN— 51/2"

CAL. 22LR, 12 SHOTS

Uberti's Cattleman series of single-action revolvers utilize a six-shot cylinder, which is loaded by bringing the hammer back to the first notch and swinging the loading gate downward to allow access to the cylinder chambers.

ALWAYS TREAT EVERY FIREARM AS IF IT WERE LOADED.

All 1873 single-action target revolvers come with an angled front target sight and an adjustable, notched rear blade sight.

1873 REVOLVER CARBINE — 18" CASE-HARDENED, WALNUT STOCK

Traditional field sights.

Ptallion

Colt introduced a single action cal.22 identical to the model 1873 line but smaller in size. It was called the "Frontier Scout". The shape of the grips, the fixed or adjustable sights are identical to the Single Action 1873 Cattleman. Calibers .22LR and .22Mag have interchangeable cylinders. The model Lightning is made only in .38Sp, 38LC. and 41 Colt.

The Colt Bisley was designed as a target pistol to compete at the British Commonwealth Championship Match in Bisley, England in 1894. The Bisley featured a longer grip-frame for its target grips and a wide target hammer with a lower profile. Over 40,000 Colt Bisleys were made between 1894 and 1915.

The Bisley was designed as a target pistol and features a longer grip-frame and a wide, lower profile, target hammer.

The 1875 Army Outlaw embodies the overall styling of the original Remington 1858 percussion revolver complete with bottom blade.

The 1890 Police is chambered in .357 Magnum and .45 Colt and like the original, it comes complete with a lanyard ring.

The 1890 Police, styled similar to the Colt by eliminating the bottom blade, was Remington's offering to enter the lucrative singleaction revolver market.

1875 Oullaw, 1890 Police

Keeping the solid frame and overall styling of their 1858 percussion model, Remington jumped into the cartridge revolver market in 1875, introducing a pistol to compete directly against the Colt "Peacemaker." Ordinary citizens, outlaws and Old West lawmen alike recognized the sturdy quality of the new Remington; even Frank James carried one for much of his outlaw career. As faithful reproductions, the 1875 Outlaw revolvers is available in Frank's favorite caliber, .45 Colt.

Built from 1890 to 1896 in very small numbers, the Remington 1890 Police is one of the most prized cowboy revolvers among Old West collectors. Of the less than 2,000 produced, only a few Remington 1890s ever saw service as police revolvers and those primarily as sidearms for Indian police on western reservations. The 1890 Police is chambered in .357 Magnum and .45 Colt and comes complete with a lanyard ring just like the original.

distinct advantage in their line of work.

Russian New Model. Amongst the models for export, between 1874 and 1878, Smith & Wesson produced about 60,000 of this splendid .44 Russian for the Czar Empire and both the Turkish and Japanese governments. The Russian also originated from the model S&W N°3 using the main features. The Russian was considered to be the most beautiful pistol of that era.

New Model N3 Frontier

In 1885 Smith & Wesson expanded their programme with the New Model N°3, introducing a variation of this revolver with a long cylinder that was able to fire a .44 Winchester cartridge, generally identified with 44-40. Colt had been able to produce a revolver with this caliber, that could be used as a two-some with the Winchester Lever Action Rifle. Smith & Wesson rather liked this idea, so the factory produced 2072 pieces of this particular revolver. In respect to the previous New Model 3 produced, the main change was on lengthening the cylinder to be able to accept the longer cartridge. The cylinder length on the original New Model N°3 was 1.7/16" (36,5mm)- the .44-40 ammunition was too long, so for this reason, the cylinder was modified to 1.9/16" (39,85mm). The "Model Frontier" was blued or nickel plated with barrel lengths available in 4", 5" and 6 ½". The sales of this revolver, however, did not come up to expectance and, in March 1895, when the factory still had over 50% of production on stock, they decided to transform this model from cal.44 Winchester to .44 S&W Russian and sold them to a Japanese customer. The re-tooling came about with a replacement cylinder and, up to 1896, the factory had re-tooled almost 40% of the total production of this model and they were sold to "Takata & Company" in Japan. In this way the total number of New Model N°3 Frontier was reduced to circa 1286 units. The reason is not very clear why this particular model was not accepted in .44.40. The Company offered this model up to 1908 when the revolver was substituted by the new Smith & Wesson Hand Ejector .44

1871 Baby Rolling Block

1871 BABY ROLLING BLOCK CARBINE AND RIFLE

The Remington Arms Company has a letter from George Armstrong Custer extolling the virtues of his Remington Rolling Block Sporting Rifle. In fact, legend has it that Custer was carrying his faithful Rolling Block at Little Big Horn. The Rolling Block was produced as a military full-stock musket, target rifle, buffalo gun and even as a shotgun. The small-framed version was the "New Model N°4", and Uberti has used its inspiration for a 22" barrelled carbine, and the 26" barrelled rifle.

1860 Henry

B. Tyler Henry of the New Haven Arms Company introduced a lever-action repeating rifle the year the Civil War began. Only 1,700 Henry rifles were issued to Union troops, but as the Henry 's reputation grew, Southerners dubbed it "that tarnation Yankee rifle that they load on Sunday and shoot all week." After the war, the Henry went West and there was more than one Henry rifle in the battle at Little Big Horn, but unfortunately for Custer, all of the Henrys were used by Indians. The early bronze-framed Henrys were followed by more rugged iron-framed models.

1866 Sellowboy Garbine and Rifle

The 1866 Yellowboy was a marked improvement over the old Henry. Winchester's plant superintendent, Nelson King, devised a convenient loading gate that passed cartridges through the side of the receiver. This not only made the new rifle more functional, but also allowed for the installation of a wooden fore-end. The handy carbine version of the 1866 Yellowboy was the first true cowboy lever-action rifle and was the first rifle widely carried in a cowboy-style saddle scabbard.

The new 1866 Yellowboy was a hit worldwide. Chief Sitting Bull had an 1866, Benito Juarez's forces used Yellowboys in Mexico and the Turkish army used the new Winchester against the Russians. Uberti has recreated three of the most popular models: the Yellowboy Carbine with a 19" barrel and carbine style brass buttplate, the Yellowboy Rifle with 24¼" barrel and Short Rifle with 20" barrel, both with a brass fore-end nose cap and a solid brass crescent buttplate.

1873 Rifle and Garbine

Winchester's Model 1873 was the "Rifle that Won the West." The Model 1873 was chambered in a new more powerful cartridge, the .44/40 — a .44 caliber bullet propelled by 40 grains of black powder. However, one big factor that really insured the success of the 1873 was that Colt quickly responded by offering its frontier six-shooter chambered in .44/40. A cowboy could have both a lever action rifle and his "Peacemaker" and only need one cartridge belt.

Buffalo Bill Cody carried an 1873 and a pair of Colts chambered in .44/40 in 1876 when he worked as an Army scout. Chappo, son of Apache Warchief Geronimo packed an 1873, as did most Texas Rangers along with every Old West Cowboy worth his salt. Uberti has recreated the 1873 in five distinctive models including the 1873 Carbine and the Special Sporting Rifle.

NEW 1873 CARBINE — 19"
BLUE OR WHITE FINISH ONLY,
CAL.44MAG

1873 SHORT RIFLE — 20"
CASE-HARDENED, OCTAGONAL BARREL

1873 SPECIAL SPORTING RIFLE — 241/4"
CASE-HARDENED, OCTAGONAL BARREL

The 1876 rifle includes a lever lock to ensure the lever remains securely in place.

1876 Rifle and Garbine

1876 RIFLE — 28" CASE-HARDENED, STRAIGHT STOCK

In 1876 Winchester introduced a new lever-action rifle; they called it the "Centennial Rifle" in commemoration of the United States' 100th anniversary. Winchester's Model 1876 was discontinued in 1898, after 63,871 guns had been produced. For 2008, 132 years after the first 1876 Rifle was produced by Winchester, Uberti introduces an exact replica of the Winchester "Centennial Rifle." True to the original, Uberti's 1876 Rifle is chambered in the hard-hitting calibers: .45-60, .45-75, .50-95 and .40-60—strong enough to take down North America's largest big-game animals. It also comes with a 28" octagonal barrel, fully-adjustable sights, color case-hardened receiver and walnut straight stock and fore-end.

Favored by the likes of Theodore Roosevelt, the 1876 "Centennial Rifle" was the King of its day. Uberti has brought this legend back to life, only better than before. Better, stronger materials and more precise machining, enables Uberti to replicate the original model to more exacting tolerances and specifications, making it stronger and more accurate with today's modern smokeless and blackpowder ammunition.

When you pick up an Uberti, you're holding history in your hands!

1883 Burgess Rifle and Carbine

1883 BURGESS RIFLE — 251/2"

1883 MODEL LEVER ACTION RIFLE

The 1883 Colt Burgess lever action made from '83 to '85 represents Colt's lone attempt to compete with Winchester for the lever action rifle market. Colt's initiative resulted in 6403 rifles. Manufacture of the Colt Burgess ceased early in 1885, only 21 months following its introduction.

The model gun for the Colt Burgess is exhibited in the Colt Collection of the Connecticut State Library. With such a small production the Burgess is one of the rarer models of Colt weapons and has considerable Collector's appeal.

Collectors have nicknamed the Colt lever action the "Burgess" after its inventor, Andrew Burgess. Burgess was a well known civil war photographer, designer of fire alarms and a prolific designer of firearms. He had nearly 600 firearms patents to his credit.

Only three engraved pieces were made and one of these (serial n°285) was presented to William F. (Buffalo Bill) Cody. On the side of the frame is a motif of Cody shooting a buffalo from horseback, using a Colt Burgess rifle. So, the fact that Buffalo Bill Cody owned one of these guns

adds to their color and appeal, as does the overall handsome design and the lever operated action.

Original price sheets from Colt and Winchester show the Winchester 1873 carbine was priced at \$17,50 whereas the Colt Burgess carbine was priced at \$24,00.

According to tradition, Winchester did not take kindly to the intrusion and developed a few revolver designs which would have then been in direct competition with Colt's mainstay products. Before long, a deal was reached and Winchester agreed to stay out of the revolver business.

1884 Lightning* Rifle and Carbine

The Colt Lightning rifle, introduced in 1884, was chambered in .44-40, the most popular pistol round offered for Colt's 1873 single action revolvers. Colt followed with Lightnings in three different frame sizes to accommodate a wide range of cartridges from .22 caliber up to .50-95 Express. More than 185,000 Lightning Rifles were manufactured, but there hasn't been a new one made since 1904 — that is until now.

The Lightning Rifle by Uberti is an exact replica of the original Colt Lightning, but by using modern steel and manufacturing techniques, the Uberti Lightning will safely stand up to modern ammunition. The Lightning Rifle is available in .45 Colt or .357 Magnum, all with luster finished satin walnut stocks and a choice of blued or color case-hardened receivers. When it comes to speed it can still beat any Winchester —or, as Sam Colt used to put it, "nothing is faster than Lightning."

1885 SINGLE SHOT RIFLES AND CARBINE

The production of the Single Shot started in September 1885 using the Browning patent and terminated towards the end of 1920. It became one of the best known guns and was regarded by many as being the best Single Shot ever to be made. Without doubt it is stronger than the Sharps, better designed, very accurate and reliable in every way. Few guns have been made in so many different calibers - high walls even served in the development of the 7.62 Nato round.

The gun was produced during a period in which target shooting was a really popular sport; they were used in International Competitions at 1,000 yards.
